

Introducing the Janome FM725

No threads ... No bobbins ... No limits

Xpress yourself!

Bring out the artist in you, select from your palette of fabrics and threads and blend together to create unique textures and surfaces.

It's easy, by simply moving the fabrics freely under the needles you can quickly and easily create beautiful surface embellishments.... watch your own design develop..... anyone can do it!

The Janome FM725 will help you create fabrics which can then be sewn into a finished garment, furnishing or be simply used as a work of art. It has five barbed needles which mesh the fibres to secure two or more pieces of fabric together. Every design you create will be unique .. experiment with colours, fabrics, yarns and a whole host of other creative materials.. a fantastic use of all those scraps of fabric and threads you never want to throw away!

A built in needle guard is provided for safety and there is easy access to the lint collection area under the needle plate. It even has a free-arm facility. The accessory kit includes a spare 5 - needle unit, a single needle unit (plus spare needles) for finer work and a single hole needle plate for heavier fabrics. And there is an optional interchangeable needle kit available... so now you have all the needle options you'll ever want ! Stop press .. just launched a large extension table !!

The FM725 is quick .. easy and definitely lots of creative fun.
